

Download JCMS

JCMS's configuration consists of the data, stored in a MySQL database (required), and two multi-user interfaces. Both interfaces can be used simultaneously or stand-alone. The MySQL database can reside on a personal computer or file server.

New installation options:

1. Both interfaces. Download both installer/upgraders.
 - Begin by installing JCMS Access first
 - Followed by JCMS Web
2. Only one interface. Download and install the appropriate installer/upgrader
 - JCMS Access
 - JCMS Web
3. Adding JCMS Web interface
 - Download and run the installer/upgrader for JCMS Web

Upgrade options:

1. Currently using a MySQL database
 - Download and run the installer/upgrader for the interface that needs upgrading (JCMS Access or JCMS Web).

- If both interfaces should be upgraded, download and run the JCMS Web installer/upgrader, then download the latest version of the JCMS Access interface from the [download page](#) and link it to MySQL.
2. Currently using JCMS Access interface with a MS Access database (JCMS_db.mdb)
 - The database must FIRST be converted to MySQL.
 - Download both installer/upgraders.
 - Run the JCMS Access installer/upgrader to upgrade to the latest version of the JCMS Access interface.
 - Then run the JCMS Web installer/upgrader to add the JCMS Web interface.

JCMS Access

The latest version of JCMS Access is 6.1.9. This version is only supported on MS Access 2007 and 2010 (32-bit).

- [Download JCMS Access 6.1.9 Installer/Upgrader](#) (released 5/28/2015)

If you are running another version of MS Access, please download version 3.4.3 which runs on all versions of MS Access prior to 2007. (*This will not be supported much longer*)

- [Download JCMS Access 3.4.3](#)

Multi-User instructions for upgrading multiple clients are [here](#).

Minimum system requirements are [here](#).

JCMS Web

[Download the JCMS Web Installer/Upgrader](#)

v3.14.0 (released 5/15/2015)

The web application installer/upgrader is a JAVA program that examines your systems for the technical prerequisites such as the version of Java, the supported versions of MySQL, and the supported versions of JCMS. If there are any problems you are notified and directed on how to fix it.

If your configuration meets the installation requirements, then the installer installs JBoss 6.1 on your system and adds a new JCMS Web interface and MySQL database, or the upgrader upgrades an existing JCMS Web interface and MySQL database.

Minimum system requirements are [here](#).
