

JCMS Web – New Installations

For a JCMS Web software demo, please click [here](#). Username: jcms Password: jcms

The JCMS Web application is a user interface to a JCMS MySQL database. The current release does not include all the functionality of the JCMS Access interface, however, it provides:

- Creating ad-hoc queries of mice and mating data (you can also save and recall queries);
- Cage card creation interface;
- Pedigree tracking functionality;
- Mouse scheduling with calendar view;
- Reports (cage use, colony summary, weaning with calendar view);
- Basic colony management functions: add mouse, edit mouse, list mice, add matings, edit matings, add litter with pups, edit litter, genotyping;
- User administration (add users to workgroups);
- Controlled vocabulary and setup variable administration.
- Dashboard (cage histogram, mouse histogram, strain viability, Kaplan Meier charts);
- Sample tracking;
- Experiment data;

Installing the JCMS Web interface will not affect the way your current Microsoft Access JCMS interface works with the MySQL data. That will remain the same. If you are a new user, you do not have to install a JCMS Access interface. JCMS Web may be used stand-alone, or you may install both interfaces. Click here for the complete [Installation Guide for JCMS Web](#).

- A new user wanting to use both interfaces should download and run the JCMS Access Installer-Upgrader first ([download here](#)) followed by downloading and running the JCMS Web Installer-Upgrader, selecting the NEW option.
- If you have an existing JCMS Access interface and are installing JCMS Web, download and run the JCMS Web Installer-Upgrader selecting the UPGRADE option. This will setup both interfaces to use the same MySQL data.
- To install and use only the JCMS Web interface, download and run the JCMS Web Installer-Upgrader selecting the NEW option.
