JCMS Access Pedigree Tracker

**JPT functionality has been implemented on JCMS Web, and will not longer be supported as a stand alone tool.

In order to use JCMS Access Pedigree Tracker you need:

- To have sufficient rights to create a directory on your local machine
- Java 6 – JCMS Web is not compatible with Java 7 so Java 6 will need to be downloaded and installed.
    - Windows: http://www.oracle.com/technetwork/java/javasebusiness/downloads/java-archive-downloads-javase6-419409.html#jre-6u43-oth-JPR
      Mac: http://support.apple.com/kb/dl1573
- JAVA_HOME environment variable configured properly pointing to Java 6 directory:
    - Windows: http://colonymanagement.jax.org/support-2/faqs/jcms-web-application/

Take the following steps to setup and run JCMS Access Pedigree Tracker on your personal computer:

1. Download JCMS Access Pedigree Tracker from here
2. Create a JPT directory on your file system
3. Unzip contents to JPT directory
4. Run command "java -jar jptGUI.jar"
5. Setup JPT using this Quick Start Guide
